                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 fit gene encoding receptor type tyrosine kinase. The promoter is useful for the tissue specific expression of heterologous proteins. Vectors cong. the DNA were used to transform vascular endothelial cells, such that a protein of interest could be expressed. The ligand controlling the function of the promoter may be used as a neovascularisation inhibitor.

                                                                                                                                                                 The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 and 500 are missing from the sequence listing) sequences (Ss) and sequences complementary to (Ss). The nucleic acid may be a peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an array for analysing diseases associated with CpG dinucleotides e.g. ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific
Fragments of chemically modified genes associated with tumbur suppressor genes and oncogenes, useful in designing primers and prohes for

```
The invention relates to a nucleic acid comprising a sequence of at least 16 bases of a segment of chancelly pretreated bWh or games associated with cell signalling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chanically modified DNA of genes associated with cell signalling, as well as oligonuclectides and/or PNA-oligomers for detecting cytosine methylations, as well as a method which is particularly suitable for the diagnosis and/or therapy of genetic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid, useful for diagnosis and therapy of diseases associated with cell signalling e.g. cancer, comprises chemically modified genomic sequences of genes associated with cell signalling
                                                                                                                                                                                                           5051

```
epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as solid tumours and cancer. The sequences given in records ABI/O111-ABI/O602 represent chemically pre-treated genemic DNA's of genes associated with cell signalling.

Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the
                                                                                                                                                                                                  European Patent Office.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and therapy of e.g. severe combined immunodeficiency disease, cardiac disorders, haemophilia, solid tumours and cancer, werner syndrome, astima, HDR syndrome, Saethre-Chotzen syndrome, renai disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          selected from 43 known genes (or complementary sequences). The Cremical pretreatment converts cytosine bases unmetnylated at the Frostition to uracil or another base with hybridistantic behaviour dissimilar to cytosine, to enable analysis of cytosine methylations. In Edward to enable analysis of cytosine methylations. In second and complements (or sets/arrays) and method are useful in the diagnosis of diseases (or predisposition to diseases) associated with gene regulation and in therapy of such diseases, by enabling analysis or the cytosine methylation patterns of such genes, kits are provided. They are especially useful in diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     preeclampsia, graft versus-host disease. The present sequence is a sequence included in the sequence data for this specification and is associated with the numan gene regulation-associated genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formet directly from WHPO at ILP.WIPO.int/pub/pub/lished_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Himan gene regulation-associated gene oligonucleotide #125.

Human, signal transduction associated gene, cytosine methylation state, CpG island; signal transduction associated disease, solid tumour; cancer, antitumour; cytostatic; mutant; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         modified using a solution of bisulphite, hydrogen sulphite or disulphite. Also disclosed are oligonucleotides and/or PNA oligomers for detecting the cytosine methylation state (CpG islands) of these epigenes, and a method for the dispnosis and/or therapy of genetic appropriate parameters of genes associated with signal transduction. The genomic obna one to obtained from cells or cellular components which centain DNA, e.g. cell lines, biopsies, blood, sputum, stool, urise, cerebral-spinal fluid, tissue embedded in parafifin such as tissue from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequences of the invention are useful for the diagnosis and therapy of diseases associated with signal transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent chemically pretreated genomic DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not form part of the printe specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Oligonucleotide for diagnosis and therapy of diseases associated with signal transduction e.g. cancer, comprises chemically modified genomic sequences of genes associated with signal transduction –
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The

Claim 1; SEQ. ID NO 93; 41pp + Sequence Listing; German.

```
ö,
the invention relates to a nucleic acid (1) comprising a segment of 18 bases of chemically pretreated DNA of anglogenesis-associated genes (II) faving sequences (ABQ66571-ABQ67178) or their complements. (1), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in anglogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, neonated as the sequence of                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4571
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             181 GCGGGAAGAGGAGGAAGGGGAGAGAGAGGCGGACTGCGCCTCAGICCTCCGTGCCAAGAAC 240

The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with consulphite, of genes associated with tumour suppression and concepnes having a sequence taken from 506 (actually 533 since numbers 408, 458 and 560 are missing from the sequence listing) sequences (SS) and sequences complementary to (SS). The nucleic acid may be a form part of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an array for analysing diseases associated with CpG diructeotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or epigenetic parameters for the diagnosis and/or therapy of existing diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of genetic and/or prognosis events which are diseases serving as basis for diagnosis and/or prognosis events which are diseases to parameters. The
                                                                                                                                                                                                                                                                                                                  533 genomic sequences derived from tumour suppressor genes and oncogenes. Sequences with even numbered Seq ID numbers are the complementary sequence of the corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID 535, except for those whose partner sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1624 AAAAAGGGAAAAAAAGCCIAAAAAAGCGAAACGGGGCIOCGAACCGGAGCGGGCIOGCGA 1565
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2044 CCGARARAPAACACGARCAACACGCTCCCCTRARACTAARTTATTCGCARICTICCCAAAAA 1985

The invention relates to a nucleic acid comprising a sequence of at least 18 bases of a segment of chemically pretreated DNA of genes associated with cell signalling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is signalling, as well as a cytostatic, the object of the invention is signalling, as well as a lignoncleotides and/or PNA-oligoners for detecting cytosine methylations, as well as a merhod which is particularly suitable for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as solid tumours and cancer. The sequences given in records ABL70111-ABL70626 represent chemically pre-treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           with cell signalling e.g. cancer, comprises chemically modified genomic sequences of genes associated with cell signalling

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to 224 nucleic acid sequences comprising at least 18 bases of a chemically pretreated gane associated with gene regulation selected from 43 known genes (or complementary sequences). The chemical pretreatment converts cytosine bases unmethylated at the
                                                                                                                                                                                                                                                                                                                                                                                                                                colorectal cancer; thyroid cancer; oesophageal cancer; ds; tumour; immunostimulant; cardiant; antiinflammatory; coagulant; antiasthmatic; nephrotropic; gynecological; anti-tumour; immunosuppressive; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid sequences from chemically modified genes associated with gene regulation, useful for analysing cytosine methylations for diagnosis and therapy of diseases e.g. severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S-position to uracil or another base with hybridisation behaviour dissimilar to cytosine, to enable analysis of cytosine methylations. The DNA sequences, oligomers (or sers/arrays) and method are useful in the diagnosis of diseases (or predisposition to diseases) associated with gene regulation and in therapy of such diseases, by kits are provided. They are especially useful in diagnosis, and therapy of e.g. severe combined immunodeficiency disease, cardiac disorders, haemophilia, solid tumours and cancer, Merner syndrome, asthma, HDR syndrome, Saethre-Chotzen syndrome, renal disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    preeclampsia, graft versus-host disease. The present sequence is a sequence included in the sequence data for this specification and is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB 24; Length 6316;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the printed specification, but was obtained in electronic mat directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          their complementary sequences.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the Buropean Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             signal transduction associated genes. The DAR sequences are chemically modified using a solution of bisulphite, hydrogen sulphite or disulphite. Also disclosed are oligomuclectides and/or PAR oligomers for detecting the cytosine methylation state (CpG islands) of these genes, and a method for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with signal transduction. The genomic DAR can be obtained from cells or cellular components which contain DAR, e.g. cell lines, blogals, sputum, stool, urine, eerebrial spinal fluid, tissue embedded in paraffin such as tissue from eyes, intestine, kidney, brain, heart, prostate, lung, breast or liver, histologic object slides, and all their possible combinations. The diseases associated with signal transduction e.g. solid tumcers and diseases associated with signal transduction e.g. solid tumcers and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Oligonucleotide for diagnosis and therapy of diseases associated with signal transduction e.g. cancer, comprises chemically modified genemic sequences of genes associated with signal transduction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2044 CCGAAAAAAACACGAACACCCCTAAAACTAAATTCGCAATCTICCCAAAAA 1985

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;
growth factor (VEGF). PCR cloning was used to obtain the fil-1 derived TRR (sVEGF-RI) sflt-1 cDNA from a HUVEC cDNA library. The invention relates to methods of gene therapy for inhibiting anglogenesis associated with solid tumor growth, tumour metastasis, psoriasis, rheumatoid arthritis, haemangioma, diabetic retinopathy, anglofibroma and macular degeneration. For primary tumour growth and metastasis, this involves tranfer of a nucleotide sequence encoding a soluble form of VEGF TRR to a mammalian (human) host, preferably using an adenovirus or recombinant plasmid DNA vector. The transferred nucleotide sequence transcribes mink and a soluble receptor protein which binds to VEGF in extracellular regions adjacent to the primary tumor and vascular endothelial cells. Formation of a sVEGF PLYRGF comptex prevents binding of VEGF-Rabe the signals associated with vascular endothelial cell-induced tumour anglogenesis. Expression of a soluble TRR may also impart a signals associated with vascular endothelial cell-induced tumour anglogenesis. Expression of a soluble TRR may also impart a therapeutic effect by binding either with or without VEGFs to form thereby inhibiting the mitogenic and anglogenic activities of the present the present anglogenic activities of sequence and sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   730 GOGGACACTCCTCTCGGCTCCTCCCGGCAGCGGCGGCTCGGAGCGGGCTCCGGGGC 789

                                                                                                                                                                                                                                                                                                     fragment of the VEGF receptor that binds VEGF with high affinity but is unable to transduce a signal. sVEGF-RI is used to inhibit VEGF activity, specifically VEGF-Induced angiogenesis, particularly for treatment of pscriasis, rheumatoid arthritis, haemanglomas, angiofibromas, diabetic retinopathy, neovascular glaucoma or tumour vascularisation. The sVEGF-RI can be administered topically or intravenously or from slow-release

```
This is the nucleotide sequence encoding the lst-7th immunoglobulin-like domains of the extracellular domain of VEDF (vascular endothelial cell growth factor) receptor FLT. The sequence is amplified by the primars ANV01458-V01459. The VDGF receptor sequence can be used to generate truncated mutants which comprise the immunoglobulin-like domains 1-3, 1-4, 1-5 or 1-7. The polypeptides can be used in treatment of solid tumours and other diseases accompanied by pathological vascularisation since they inhibit vascularisation by stimulation with VEGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        850 CIGGUIGGAGUCGCGAGACGGGCGTCAGGGCGCGGGGCCGGCGGCGGCGAACGAGGA 909

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Chemistry Dye-terminator Big Dye: 100% of reads Assembly program: Phrap; version 0.990329 Consensus quality: 10171 bases at least Q40 Consensus quality: 106747 bases at least Q20 Consensus quality: 110016 bases at least Q20
